

Attorney Docket No.: 0120134  
Application Serial No.: 10/776,075

**List of Claims:**

RECEIVED  
CENTRAL FAX CENTER

MAR 06 2007

**Claims 1-9 (Cancelled)**

**Claim 10 (Original):** A method of controlling a comb filter for comb filtering a plurality of video signal lines to demodulate a chrominance portion of each of said plurality of video signal lines into U and V components, said method comprising:

determining a first reference subcarrier of a first video signal line of said plurality of video signal lines;

demodulating said chrominance portion of said first video signal line into first U and V components using said first reference subcarrier;

using said first U and V components to determine a number of degrees of rotation of said first reference subcarrier from a second reference subcarrier of a second video signal line previous to said first video signal line; and

disabling said comb filter if said number of degrees is different from a predetermined number of degrees.

**Claim 11 (Original):** The method of claim 10, wherein said predetermined number of degrees is 90 degrees.

**Claim 12 (Original):** The method of claim 10, wherein said predetermined number of degrees is 180 degrees.

**Claim 13 (Currently Amended):** The method of claim 10 further comprising: enabling said comb filter if said number of degrees is the same as [[a]] said predetermined number of degrees.

Attorney Docket No.: 0120134  
Application Serial No.: 10/776,075

**Claim 14 (Original):** A decoder comprising:

a comb filter configured to filter a plurality of video signal lines;

a subcarrier generator configured to determine a first reference subcarrier of a first video signal line of said plurality of video signal lines;

a demodulator configured to demodulate said chrominance portion of said first video signal line into first U and V components using said first reference subcarrier; and

wherein said decoder uses said first U and V components to determine a number of degrees of rotation of said first reference subcarrier from a second reference subcarrier of a second video signal line previous to said first video signal line, and said decoder disables said comb filter if said number of degrees is different from a predetermined number of degrees.

**Claim 15 (Original):** The decoder of claim 14, wherein said predetermined number of degrees is 90 degrees.

**Claim 16 (Original):** The decoder of claim 14, wherein said predetermined number of degrees is 180 degrees.

**Claim 17 (Currently Amended):** The decoder of claim 14, wherein said decoder enables said comb filter if said number of degrees is the same as [[a]] said predetermined number of degrees.

**Claims 18-21 (Cancelled)**
